### SWOOPING SEASON

Spring often signals the beginning of the breeding season for our native birds, mainly Magpies and Plovers, which subsequently means swooping. During the nesting season, a Magpie may swoop on people, clacking its beak. While alarming, it is usually an attempt to defend its family so just a warning. The good news is that a single magpie will swoop for only six weeks until their chicks leave the nest. Last year, a list of known swooping locations was prepared to help protect you and your family. If you know of a hot spot swooping location in the Federation Council local government area, share the location with us by completing the online form available from Council's website.
